## Introduction

### **Application**

ERC 21X is a smart multipurpose refrigeration controller designed to fulfill today's requirement of commercial refrigeration applications. This controller is suitable for high, medium and low temperature applications with natural, electrical and hot gas defrost compatibilities.

Typical applications include Glass door merchandisers, commercial fridges and freezers, cold rooms and various other commercial refrigeration applications.

### **General description**

ERC 21X controller comes with four push buttons, a big display, easy and intuitive menu structure and pre-defined applications ensure ease of use. Controller is loaded with energy efficiency features like smart evaporator fan management, night mode and defrosts on demand features.

High capacity 16 A relay enable direct connection of heavy loads without use of intermediate relay: up to 2 hp compressors depending on its power factor and motor efficiency (power factor greater than 0.65 for 230 V and greater than 0.85 for 115 V).

Safe operation of the unit is ensured through voltage protection, zero cross switching and high condenser temperature protection features.

### **ERC 21X series**

Three version of ERC 21X is available in both 230 V AC, 50/60HZ and 115 V AC, 60Hz.

- ERC 211: single relay output for refrigeration and heating applications.
- ERC 213: three relays outputs for ventilated refrigeration and heating applications.
- ERC 214: four relays outputs for ventilated refrigeration and heating applications.

### **ERC 211**

ERC 211 has one relay output and two inputs (1 analogue, 1 analogue/digital). This controller can be used for either cooling or heating applications.

Figure 1: ERC 211

**Outputs:**

- Relay 1: compressor/solenoid valve control or simple heater in case of heating application.

**Inputs:**

- Input 1: control sensor (Sair).
- Input 2: condenser sensor or digital inputs that can be configured for various functions as mentioned under menu code o02.

**ERC 213**

ERC 213 has three relays outputs and four inputs (2 analogues, 1 analogue/digital, 1 digital) for cooling and heating applications.

Figure 2: ERC 213

**Outputs:**

- Relay 1: compressor/solenoid valve control or heater in case of heating applications
- Relay 2: can be configured defrost control or external alarm or cabinet light
- Relay 3: fan control

**Inputs:**

- Input 1: control sensor (Sair)
- Input 2: defrost sensor (S5)
- Input 3: condenser sensor (Sc) or digital input that can be configured for various functions as mentioned under menu code o02
- Input 4: digital input that can be configured for various functions as mentioned under menu code o37

**ERC 214**

ERC 214 has four relays outputs and four inputs (2 analogue, 1 analogue/digital, 1 digital) for cooling applications.

Figure 3: ERC 214

**Outputs:**

- Relay 1: compressor/solenoid valve control
- Relay 2: defrost control, external alarm or cabinet light
- Relay 3: fan control
- Relay 4: this can be configured for either cabinet light or external alarm

**Inputs:**

- Input 1: control sensor (Sair)
- Input 2: defrost sensor (S5)
- Input 3: condenser sensor (Sc) or digital input that can be configured for various functions as mentioned under menu code o02
- Input 4: digital input that can be configured for various functions as mentioned under menu code o37

## Functions

### Voltage protection

The voltage protection ensures that the compressor motor is operating within safe voltage ranges. If the power supply voltage gets outside the specified high/low voltage cut-out ranges, the compressor is cut-out or restricted from starting. Normal compressor operation is resumed when the power supply voltage is back in the area between the high voltage cut-out limit and the low voltage cut-in limit.

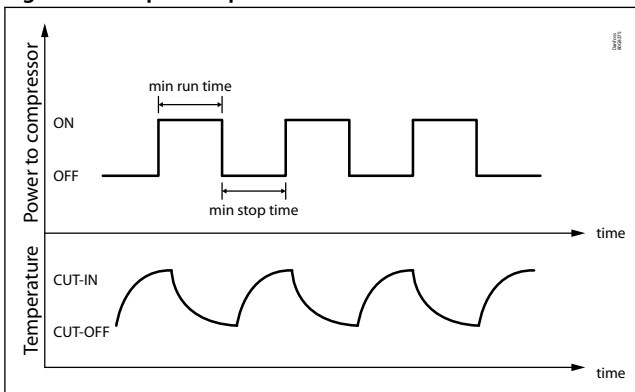

Figure 4: Voltage protection

### Compressor protection

Compressor protection feature protects compressor from short ON and OFF cycles by securing minimum run and stop time. This would allow the refrigeration system to stabilize before starting the compressor again and also avoid the chances of too many compressor cycles.

Figure 5: Compressor protection

### Compressor protection against high condensing temperature

If the condenser is blocking up with dirt and thereby reaches a too high condensing temperature, the controller will give the user early warning through condenser alarm and if temperature rises further, it will switch the compressor OFF. If the temperature measured by the condenser sensor (Sc) is reaching the set "pre-alarm limit" an alarm is raised, but no further action is taken. This is used to indicate to the user that something is wrong with the condenser. Often the reason is that the air flow to the condenser is restricted (dirt) or because the condenser fan is broken.

The alarm will reset if the condenser temperature drops back by 5 °C. If the measured condenser temperature continues to increase and reaches the set "Block limit" the compressor is stopped, and it is restricted from starting again until the alarm is reset manually. The alarm can be reset manually by setting the parameter r12 Main switch to OFF position and back to ON position or by powering the controller down.

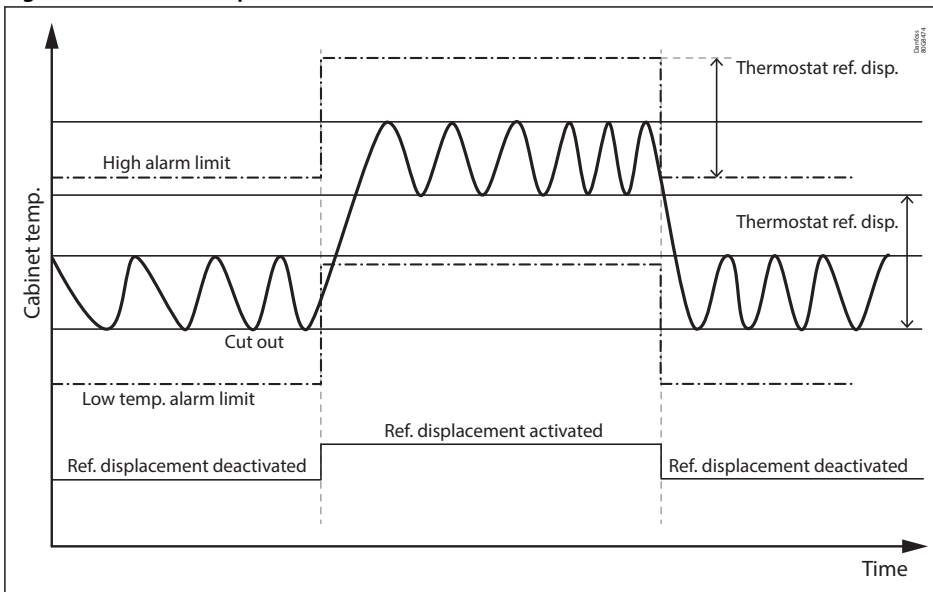

**Figure 6: Compressor protection against high condensing temperature**

**Reference displacement**

This feature enable user to toggle between two different set-points quickly by activating a switch on digital input. This provides facility to switch between two storage temperatures without getting in to the menu. For example meat requires different set points than vegetables. The reference displacement signal changes the normal thermostat set-point and the alarm limits by a predefined reference displacement offset value (r40).

**Figure 7: Reference displacement**

**Night mode**

Night mode helps to reduce cooling load and thereby power consumption during non-business hours i.e., Night time. The thermostat set point will be offset by a fixed value during night mode keeping alarm limits same.

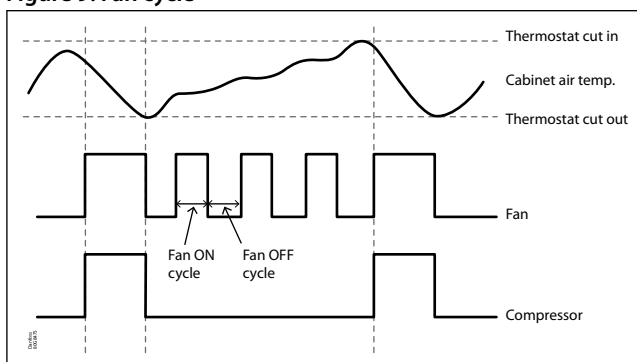

Figure 8: Night mode

### Fan cycling during compressor OFF cycle

During compressor OFF cycle controller will run the fan with defined duty cycle to maintain uniform temperature and delay the need of compressor switching ON.

Figure 9: Fan cycle

### Defrost on Demand

This feature records the evaporator temperature when it is clean and constantly monitors the compares that at every compressor cut outs. If the evaporator temperature goes below the recorded temperature by the value set in parameter d30 before the configured defrost interval, it will trigger defrost immediately.

- This function can only be used in 1:1 systems.
- This function is disabled when the parameter “d30” is set to 20.
- Defrost on demand is triggered only if the time since the last defrost session has ended is greater than ¼ of the defrost interval or 2 hours whichever is lesser.
- Defrost doesn’t start by this method during the following scenarios.
  - Pull down mode
  - Night mode
  - Main switch in DI or main switch in Menu is in OFF position
  - Manual control mode
  - Evaporator temperature greater than 0 °C.

## Applications

### Pre-defined applications

The purpose of the pre-defined applications is to give the user an easy and fast way to configure the controller to a specific application based on storage temperature (LT, MT, HT), defrost type (none, natural, electrical) and defrost method (terminated on time or temperature).

When user select specific application based on their requirements, the controller will load a specific set of parameter values and will hide parameters that are not relevant for the selected application. Adjustment of the set of parameters value will be still possible at any time.

In addition to pre-defined applications, all controller versions have two standard applications, one with full list of parameters and another with simplified list of parameters, that allows the user to make their own customized parameter settings (AP0 and AP5 in case of ERC 211 and AP0 and AP6 in case of ERC 213 / ERC 214).

### ERC 211 controller

**Table 1: Pre-defined application table of ERC 211 controller**

APP	Description	Temp. range	Defrost end	DO1	A11	DI1 <sup>(1)</sup>
AP0	Fully Configurable Standard Application (Cooling / Heating)					
AP1	MT, No defrost	4 – 20 °C	NA		Sair	DI1
AP2	MT, Natural defrost	2 – 6 °C	Time		Sair	DI1
AP3	MT, Natural defrost, defrost stop by Sair	2 – 6 °C	Sair temp		Sair	DI1
AP4	Heating Thermostat	30 – 70 °C	NA		Sair	DI1
AP5	Fully configurable simplified application (Cooling / Heating)					

<sup>(1)</sup> The digital inputs DI1 can be configured for multiple functions (refer parameter "o02").

### ERC 213 controller

**Table 2: Pre-defined application table of ERC 213 controller**

APP	Description	Temp. range	Defrost end	DO1	DO2	DO3	A11	A12	DI1 <sup>(1)</sup>	DI2 <sup>(1)</sup>
AP0	Fully Configurable Standard Application (Cooling / Heating)									
AP1	MT, Natural defrost, Alarm, fan	2 – 6 °C	By time				Sair	NC	DI1/Sc	DI2
AP2	MT, Electrical defrost, Fan	0 – 4 °C	By time				Sair	NC	DI1/Sc	DI2
AP3	LT, Electrical defrost, fan	-24 – -18 °C	By time				Sair	NC	DI1/Sc	DI2
AP4	MT, Electrical defrost, Fan	0 – 4 °C	By temp(S5)				Sair	S5	DI1/Sc	DI2
AP5	LT, Electrical defrost, Fan	-26 – -20 °C	By temp(S5)				Sair	S5	DI1/Sc	DI2
AP6	Fully configurable simplified application (Cooling / Heating)									
AP7	Heating Thermostat	30 – 70 °C	NA				Sair	NC	DI1	DI2

<sup>(1)</sup> The digital inputs DI1 and DI2 can be configured for multiple functions (refer Parameters "o02" and "o37").

NC = Not configured

ERC 214 controller

Table 3: Pre-defined application table of ERC 214 controller

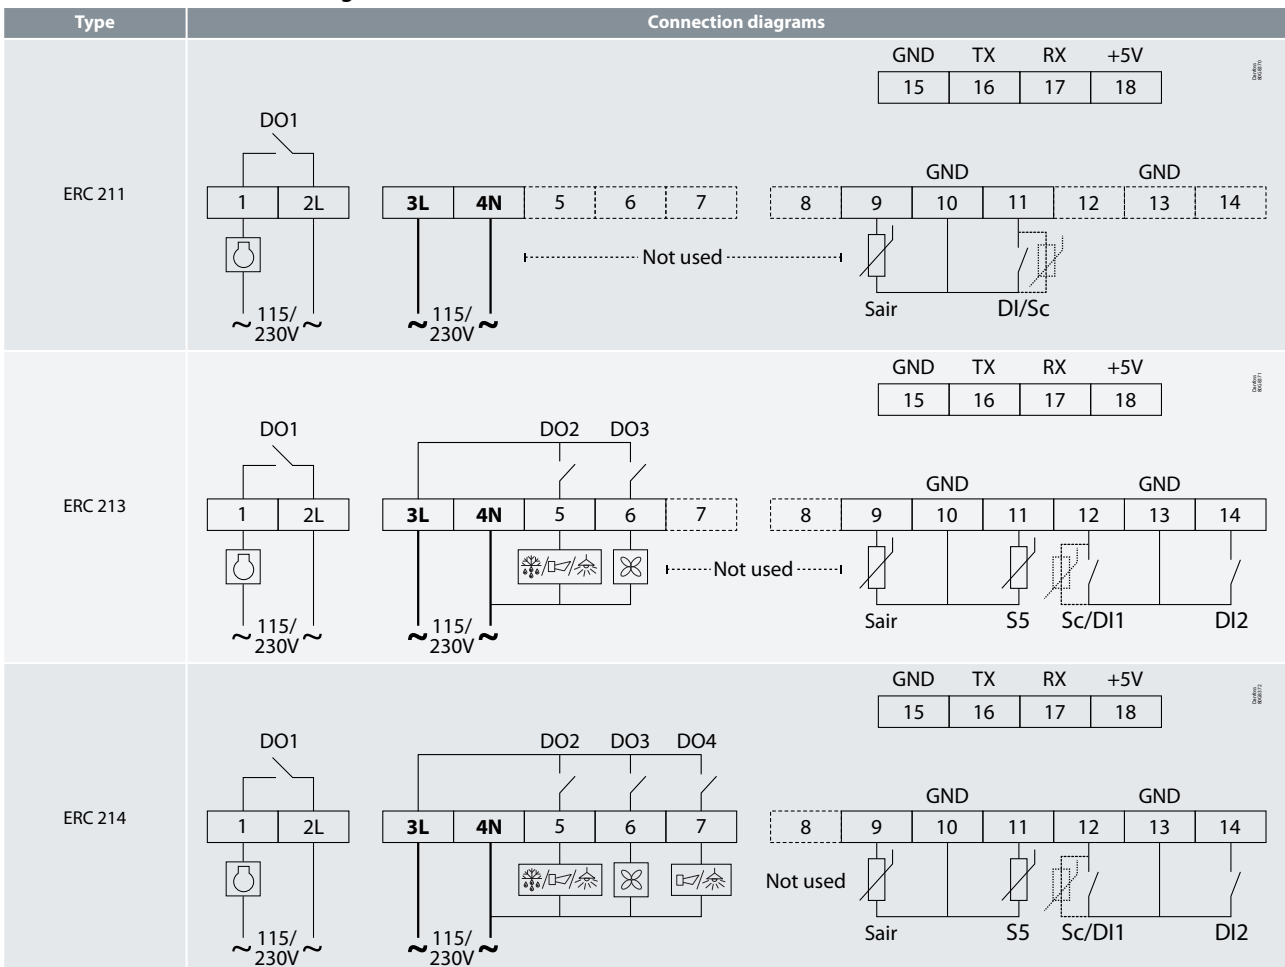

APP	Description	Temp. range	Defrost end	DO1	DO2	DO3	DO4	AI1	AI2	DI1 <sup>(1)</sup>	DI2 <sup>(1)</sup>	
AP0	Fully Configurable Standard Application (Cooling / Heating)											
AP1	MT, Natural defrost, Alarm, fan	2 – 6 °C	By time					Sair	NC	DI1/Sc	DI2	
AP2	MT, Electrical defrost, Fan	0 – 4 °C	By time					Sair	NC	DI1/Sc	DI2	
AP3	LT, Electrical defrost, fan	-24 – -18 °C	By time					Sair	NC	DI1/Sc	DI2	
AP4	MT, Electrical defrost, Fan	0 – 4 °C	By temp(S5)					Sair	S5	DI1/Sc	DI2	
AP5	LT, Electrical defrost, Fan	-26 – -20 °C	By temp(S5)					Sair	S5	DI1/Sc	DI2	
AP6	Fully configurable simplified application (Cooling / Heating)											
AP7	Heating Thermostat	30 – 70 °C	NA					Sair	NC	DI1	DI2	

<sup>(1)</sup> The digital inputs DI1 and DI2 can be configured for multiple functions (refer Parameters "o02" and "o37")

NC = Not configured

**Electrical connection diagram**

Table 4: Electrical connection diagram

## Electronic refrigeration control, type ERC 21X

---

<b>3L, 4N</b>	Power supply 115 V AC or 230 V AC (refer to the controller label).
<b>Sair</b>	Control Sensor
<b>S5</b>	Defrost (evaporator) sensor
<b>Sc</b>	Condenser sensor
<b>DI1</b>	Digital input - configurable to the functions listed under menu code o02.
<b>DI2</b>	Digital input - configurable to the functions listed under menu code o37.

**NOTE:**

1. Cables for sensors, DI inputs and data communication must be kept separate from other high voltage cables to avoid electric noises.
  - Use separate cable trays
  - Keep a distance between cables of at least 10 cm
  - Long cables at the DI input should be avoided
2. Do not use excessive force while securing wires in to the connectors, allowed tightening torque and wire sizes are:
  - Power connectors: wire size = 0.5 – 1.5 mm<sup>2</sup>, max. tightening torque = 0.4 Nm
  - Low voltage signal connectors: wire size = 0.15 – 1.5 mm<sup>2</sup>, max. tightening torque = 0.2 Nm
  - 2L and 3L must be connected to the same phase

## Configuration

### Menu navigation and overview

**Table 5: Key functions**

	Scroll up: Short press (less than 1 second) Main switch ON/OFF : Press and hold (~ 3 seconds) Factory reset: Press and hold at Power up		Scroll down: Short press (Less than 1 sec.) Defrost Start/Stop : Press and hold (~3 secs.)
	Back function : Short press (less than 1 sec.) Pull down start / stop : Press and hold (~3 secs.)		Set point change or OK : Short press (Less than 1 sec.) Enter Menu : Press and hold (~ 3 secs.)

**Table 6: Display icons**

	Night mode (Energy saving)		Fan running
	Compressor running (Flashes in pull-down mode)		Active alarm
	Defrost		Unit (°C or °F)

### Quick configuration at power up

- **STEP 1: power on**
- **STEP 2: select the quick configuration menu**  
Within 30 seconds of power on, press “<” BACK for 3 seconds. The main switch “r12” is automatically set to OFF.
- **STEP 3: select pre-installed application o61**  
The display automatically shows the application selection parameter “o61”.  
Press SET to select the pre-installed application.  
The display shows the default value (eg. “AP0” flashing).  
Choose the application type by pressing UP/DOWN and press SET to confirm.  
The controller presets parameter values according to the selected application and does not hide relevant parameters.  
Tip: you can easily move from AP0 to AP6, and thus select the simplified list of parameters, by pressing the UP key (circular list).
- **STEP 4: select sensor type “o06”**  
The display automatically shows sensor selection parameter “o06”.  
Press SET to select the sensor type.  
The display shows the default value (eg. “n10” flashing).  
Choose sensor type by pressing UP/DOWN (n5=NTC 5 K, n10=NTC 10 K, Ptc=PTC, Pt1=Pt1000) and press SET to confirm.
- **NOTE:**  
All sensors must be the same type.
- **STEP 5: configure DO4 output “o36”**  
The display automatically shows the o36 parameter to configure “DO4” output. (Available only in 4 relays model).  
Select light “Lig” or alarm “ALA” as per the application and press SET to confirm.  
The display returns to normal display mode and the control is started.

**NOTE:**  
Refer [Pre-defined applications](#) for a complete description of the available applications.

Figure 10: Configuration

### Quick configuration via cFg menu

1. Press "SET" button for 3 seconds to access the parameter menu (display will show "cFg").
2. Enter "cFg" menu by pressing "SET" button (display will show first parameter "r12" main switch).
3. Select "r12" by pressing "SET" button again and set the main switch to "oFF" (r12=0).
4. Press back button (<) to come back to 'cFg' menu.
5. Press DOWN button to scroll through the "cFg" menu parameter list.
6. Open the "o61 application mode" and select needed application mode (Press SET).
7. Open the "o06 Sensor type" and select the temperature sensor type used (n5=NTC 5 K, n10=NTC 10 K, Ptc=PTC, Pt1=Pt1000)- (Press "SET").
8. Open the "o02 DI1 Configuration" and select the function associated to digital input 1 (Press "SET").

9. Open the “o37 DI2 Configuration” and select the function associated to digital input 2 (Press “SET”).
10. Navigate back to parameter “r12 Main switch” and set it in “ON” position to start control.
11. Go through other parameters default settings and change wherever needed

Figure 11: Adjust Setpoint

- |   |   |
|---|---|
| A | Short press "SET" button (Setpoint flashes)     |
| B | Press UP/DOWN button to change setpoint         |
| C | Press "SET" button to save the changed setpoint |

Figure 12: Initiate a manual defrost

- |   |   |
|---|---|
| A | Press "DEFROST" button for 3 seconds to initiate a defrost (Display shows "-d-" during defrost) |
| B | Press "DEFROST" button again for 3 seconds to stop defrost.                                     |

Figure 13: Initiate a pull down

- |   |   |
|---|---|
| A | Press "PULL DOWN" button for 3 seconds to initiate pull down (controller displays "Pud" during pull down) |
| B | Press "PULL DOWN" button again for 3 seconds to stop the pull down  |

Figure 14: View active alarm

- |   |   |
|---|---|
| A | Temperature and alarm codes alternate flashes until the alarm is resolved. The alarm bell is shown. |
|---|---|

Figure 15: Unlock keyboard

- A**
- After 5 minutes of no activity, the keypad is locked (if P76=yes).
  - When the keypad is locked any button press shows “LoC” in the display.
  - Press UP and DOWN buttons simultaneously for 3 seconds to unlock the keyboard. “unl” is displayed for 3 seconds.

## Factory resetting

The controller can be set back to factory settings by using the following procedure:

1. Power OFF controller.
2. Keep up “^” and down “v” arrow buttons pressed while reconnecting the supply voltage.
3. When the code “Fac” is shown in the display, select “yes”.

### **i** NOTE:

The OEM factory setting will either be the Danfoss factory settings or a user defined factory setting if one has been made. The user can save his setting as OEM factory setting via parameter o67.

## Display codes

Table 7: Display codes

Code	Description
-d-	Defrost cycle is in progress
Pud	A temperature pulldown cycle has been initiated
Err	The temperature cannot be displayed due to a sensor error
---	Shown in top of display: The parameter value has reached max. Limit
---	Shown in bottom of display: The parameter value has reached min. Limit
Loc	The display keyboard is locked
UnL	The display keyboard has been unlocked
PS	The access code is required to enter the parameter menu
Axx/Exx	Alarm or error code flashing with normal temp. readout
OFF	Control is stopped as r12 Main switch is set OFF
On	Control is started as r12 Main switch is set ON (code shown in 3 seconds)
Fac	The controller is reset to factory setting

## Parameters

### Parameter description

#### Configuration

**Table 8: Configuration**

Code	Parameter description	Min.	Max.	Unit
<b>cFg</b>	<b>Configuration</b>			
r12	<b>Main Switch</b> With this setting refrigeration can be started, stopped or a manual override of the outputs can be allowed. Service (manual control of outputs allowed)(-1 in Controller Display) OFF (0 in Controller Display) ON (1 in Controller Display)	Service	ON	
o61	<b>Predefined applications</b> Predefined applications is to give the user an easy and fast way to configure the controller. Users can set appropriate application that meets their requirements under this menu (please refer predefined applications table under section 2.4 for more details). Predefined application is protected by main switch.	AP0	AP7	
o07	Select main application type for which controller is used rE= Cooling Ht= Heating	rE	Ht	
o06	<b>Sensor type</b> This parameter defines the type of temperature sensors connected to the controller. Below sensor types can be used in ERC21x n5=NTC 5K (5000 Ohm at 25 °C, Beta value=3980 @25/100 °C) n10= NTC 10 (10000 Ohm at 25 °C, Beta value = 3435 @ 25/100 °C) pt1= PT1000 ptc= PTC All the mounted sensors (Sair, S5 and Sc) must be of same type.	n10	pt1	
o71	This parameter defines the desired configuration for Relay 2 (DO2) dEF=Defrost ALA=alarm Lig=Light	dEF	Lig	
o36	This parameter defines the desired configuration for Relay 4 (DO4). Applicable only for ERC214. Lig=Light ALA=alarm	Lig	ALA	

#### Thermostat

**Table 9: Thermostat**

Code	Parameter description	Min.	Max.	Unit
<b>r--</b>	<b>Thermostat</b>			
r00	<b>SetPoint</b> This parameter defines the desired cabinet temperature at which compressor cuts out. The set point can be locked to a range within r02 and r03 settings.	-100.0	200.0	°C
r01	<b>Differential</b> This defines the difference between the cut-out and the cut-in of compressor relay. Compressor relay will cut-in when the cabinet temperature reaches the set point+ differential. In case of heating application, heater will cut-in when the temperature reaches the set point-differential.	0.1	20.0	K
r02	<b>Maximum Set Point limitation</b> The maximum allowable setpoint value can be configured here that would avoid setting too high values by mistake.	-100.0	200.0	°C
r03	<b>Minimum Set Point limitation</b> The minimum allowable setpoint value can be configured here that would avoid setting too low values by accident/mistake.	-100.0	200.0	°C
r04	<b>Display offset</b> Correction value in display temperature. If the temperature of the products / cabinet and the temperature received by the controller are not identical, an offset adjustment of the display temperature can be carried out using this parameter.	-10.0	10.0	K
r05	<b>Display Unit</b> Set here if the controller is to show temperature values in °C or in °F. Switching from one to the other will cause all temperature settings to be automatically updated to respective unit.	-C	-F	
r09	<b>Calibration of Sair</b> This parameter is a relative value and allows adjustment of the Sair sensor temperature. For instance, at a measured temperature of 7 °C and r09 set to 2K, the input from the Sair sensor will be 9 °C instead.	-20.0	20.0	K
r12	<b>Main Switch</b> With this setting refrigeration can be started, stopped or a manual override of the outputs can be allowed. Stopped refrigeration will give a "OFF" signal on the display. -1=service (manual control of outputs allowed) 0=OFF 1=ON	-1	1	
r13	<b>Night setback value</b> The thermostat's reference can be offset by this value during night or when there is no usage. Offset can be set both positive and negative sides (Select a negative value if there is to be cold accumulation). Activation can take place via digital input.	-50.0	50.0	K

## Electronic refrigeration control, type ERC 21X

Code	Parameter description	Min.	Max.	Unit
r40	<b>Reference displacement offset temperature</b> The thermostat setpoint and the alarm values get shifted by this value when the reference displacement is activated. Activation can take place via digital input.	-50.0	20.0	°C
r96	<b>Pull-down duration</b> Maximum duration of the pull-down mode. When set as "0" Pull down mode disabled.	0	960	min
r97	<b>Pull-down limit temperature</b> A safety feature; the lowest temperature allowed during pull-down.	-100.0	200.0	°C

## Alarm settings

Table 10: Alarm settings

Code	Parameter description	Min.	Max.	Unit
<b>A--</b>	<b>Alarm settings</b>			
A03	<b>Delay for temperature alarm during normal conditions</b> High and low temperature alarm will be delayed by this value after crossing the set alarm limits. The alarm will not become active until the set time delay has been passed.	0	240	min
A12	<b>Delay for temperature alarm during pull-down/start-up/defrost</b> Controller uses this time delay to trigger low and high temperature alarms during start-up, defrost and pull-down modes	0	240	min
A13	<b>High temperature alarm limit</b> If the cabinet temperature stays above this limit for the time mentioned by the alarm delay parameters, high temperature alarm is raised.	-100.0	200.0	°C
A14	<b>Low temperature alarm limit</b> If the cabinet temperature stays below this limit for the time mentioned by the alarm delay parameters, low temperature alarm is raised.	-100.0	200.0	°C
A27	<b>DI1 delay</b> If Di1 is configured as a door open alarm or as an external alarm, this delay is used to raise the respective alarm.	0	240	min
A28	<b>DI2 delay</b> If Di2 is configured as a door open alarm or as an external alarm, this delay is used to raise the respective alarm.	0	240	min
A37	<b>Condenser high alarm limit</b> If the condenser temperature reaches above this limit, condenser alarm is raised immediately and no action is taken. The alarm is reset if temperature falls 5 K below the set temperature.	0	200	°C
A54	<b>Condenser High block limit</b> If the condenser temperature continues to increase above the A37 limit and reaches this temperature limit, condenser block alarm is raised and compressor is stopped. It is restricted to starting again until alarm is reset manually. Manual reset of condenser block alarm can be performed by power cycling the controller either by main switch button or input supply.	0	200	°C
A72	<b>Voltage protection</b> This parameter is to enable and disable the voltage protection feature, which protects compressor from adverse line voltage conditions.	no	YES	
A73	<b>Minimum cut-in voltage</b> When the compressor is due to start, the voltage of the power supply will be checked and the compressor is allowed to start if the supply voltage is greater than this value.	0	270	V
A74	<b>Minimum cut-out voltage</b> When the compressor is running, it will be switched OFF if the supply voltage goes below this value.	0	270	V
A75	<b>Maximum voltage</b> When the compressor is running, it will be switched OFF if the supply voltage exceeds this value.	0	270	V

## Defrost

Table 11: Defrost

Code	Parameter description	Min.	Max.	Unit
<b>d--</b>	<b>Defrost</b>			
d01	<b>Defrost type</b> Selection of desired defrost type no= No defrost (defrost function disabled) nAt = Natural defrost (Off cycle defrost) EL = Electrical defrost gAS = Hot gas defrost	no	gAS	
d02	<b>Defrost stop temperature</b> This parameter defines at what temperature the defrost cycle will stop. Defrost can be stopped based on either evaporator sensor or by the cabinet temperature sensor as defined in menu code d10.	0.0	50.0	°C
d03	<b>Defrost interval</b> Defines the maximum time period between the start of two defrost cycles. In case of power failure elapsed time is stored in the memory and next defrost will happen considering the stored time interval.	0	240	hour
d04	<b>Maximum defrost time</b> This parameter defines the maximum time defrost will be performed. In case of temperature based defrost this is treated as safety time to stop the defrost if it is not terminated based on the temperature.	0	480	min
d05	<b>Defrost delay at power up or DI signal</b> This parameter decides the time offset when the defrost is triggered by digital inputs or during power up. This function is only relevant if you have several refrigeration appliances or groups where you want the defrost to be staggered in relation to one another.	0	240	min

## Electronic refrigeration control, type ERC 21X

Code	Parameter description	Min.	Max.	Unit
d06	<b>Drip-off time</b> This parameter defines the time delay to start the compressor after defrost heater being switched OFF. This delay is generally provided to ensure all water droplets on the evaporator drips off before starting the refrigeration cycle.	0	60	min
d07	<b>Fan delay after defrost</b> Defines how long the delay is between the start of the compressor and the fan after defrost cycle. This would help to avoid hot air circulation in the cabinet immediately after defrost.	0	60	min
d08	<b>Fan start temperature after defrost</b> This only applies if an evaporator temperature sensor is fitted. This parameter determines at what evaporator temperature the fan will start after a defrost cycle is complete. If the time set in d07 occurs before the temperature set in d08, the fan will start in line with d07. If the temperature set in d08 occurs first, then the fan will start in line with d08.	-50.0	50.0	°C
d09	<b>Fan during defrost</b> This parameter is to define whether fan is to operate during defrost or not.	OFF	on	
d10	<b>Defrost Stop Sensor</b> This parameter is to define which sensor has to be used to exit / terminate the defrost non = none, defrost is based on time Air = Sair sensor dEF = S5 defrost sensor	non	dEF	
d18	<b>Compressor accumulated runtime to start defrost</b> When the accumulated compressor runtime is equal to the value set in this Parameter, defrost will be triggered. If the accumulated compressor runtime is less than the set value during the defined defrost interval (d03), defrost will be triggered based on the defrost interval (d03). This feature is disabled when this parameter is set to zero.	0	96	hour
d19	<b>Defrost on demand</b> The controller will record S5 temperature during each defrost interval when the evaporator is clean and continue to monitor S5 temperature. Controller triggers defrost if the S5 temperature becomes less than recorded temperature by this value it will initiate the defrost on demand. This feature is disabled when this parameter is set to 20. This function can only be used in 1:1 systems.	0.0	20.0	K
d30	<b>Defrost delay after pull down</b> This parameter defines the time delay to start the defrost after pull down cycle. This has to ensure defrost does not happen immediately after pull down cycle.	0	960	min

## Fan

Table 12: Fan

Code	Parameter description	Min.	Max.	Unit
F--	<b>Fan</b>			
F01	<b>Fan control during compressor off cycle</b> This parameter define the fan operation during compressor off cycle. FAo=Fan always ON FFC=Fan follow compressor (Fan is switched off during compressor off cycle) FPL= Fan Cycling	FAo	FPL	
F04	<b>Fan stop evaporating temperature</b> This parameter defines the maximum evaporator temperature at which the Fan must switch OFF. If the defrost sensor registers a higher temperature than the one set here, the fans will be stopped to avoid the warm air circulation in the cabinet.	-50.0	50.0	°C
F07	<b>Fan On cycle</b> This parameter is applicable only when the Fan at Compressor cut out (F01) is set to Fan cycling mode. The Fan ON time will be as per the time set in this parameter.	0	180	min
F08	<b>Fan OFF cycle</b> This parameter is applicable only when the Fan at Compressor cut out (F01) is set to Fan cycling mode. The Fan OFF time will be as per the time set in this parameter.	0	180	min

## Compressor

Table 13: Compressor

Code	Parameter description	Min.	Max.	Unit
c--	<b>Compressor</b>			
C01	<b>Compressor minimum ON time</b> This parameter determines the minimum number of minutes the compressor must run before a cut-out can take effect based on temperature. This is to avoid sudden switching ON and OFF of the compressor. When used for Heating application, suggest to set this value 0 to avoid any overheating.	0	30	min
C02	<b>Compressor minimum OFF time</b> This parameter determines the minimum number of minutes the compressor must switched OFF before a cut-in can take effect based on temperature. This is to avoid sudden switching OFF and ON of the compressor.	0	30	min
C04	<b>Compressor OFF delay at door open</b> This parameter sets the delay to stop the compressor when the door is opened. If set to 900, the function is disabled.	0	900	sec
C70	<b>Zero crossing selection</b> This feature will increase the relay life time, reduce the contact welding and switching noise by switching ON at Zero crossing. Disable zero crossing when external relay is used.	no	YES	

## Miscellaneous

**Table 14: Miscellaneous**

Code	Parameter description	Min.	Max.	Unit
<b>o--</b>				
o01	<b>Delay of outputs at startup</b> After start-up the controller functions can be delayed by the time delay defined here so that overloading of the electricity supply network is avoided.	0	600	sec
o02	<b>Desired configuration for digital input 1 (DI1)</b> nC= Not configured Sdc = Status display output doo = Door alarm with resumption doA = Door alarm without resumption SCH = Main switch nig = Day/Night mode rFd = Reference displacement EAL = External alarm dEF = Defrost Pud = Pull down Sc = Condensor Sensor	nC	Sc	
o03	<b>Serial Address</b> Data communication is possible by using external TTL to RS485 converter	0	247	No
o05	<b>Password</b> If the settings in the controller are to be protected with an access code you can set a numerical value between 0 and 999. You can cancel the function by setting to 0.	0	999	No
o15	<b>Display Resolution</b> This parameter defines the steps in which the temperature must be displayed by 0.1 or 0.5 or 1	0.1	1.0	
o37	<b>Desired configuration for digital input 2 (DI2)</b> nC= Not configured Sdc = Status display output doo = Door alarm with resumption doA = Door alarm without resumption SCH = Main switch, nig = Day/ Night mode rFd = Reference displacement EAL = External alarm dEF = Defrost Pud = Pull down	nC	Pud	
o38	This defines the method to control cabinet light on= Always on dAn = Day/Night doo=Based on door action	on	doo	
o67	<b>Save settings as factory</b> This parameter when set to YES, The current controller Parameter settings are stored as Factory default. <b>⚠ WARNING:</b> Original factory settings are overwritten	no	YES	
o91	<b>Display during defrost</b> You can set what is to be displayed during defrost here. Air = actual air temperature FrE = freezed temperature (display the temperature just before starting defrost) -d- = -d- is displayed	Air	-d-	
<b>P--</b>				
P73	<b>DI1 input polarity</b> no (normally open) = associated functionality is activated when DI1 port is short circuit and deactivated when DI1 port is open circuit. nc (normally closed) = associated functionality is activated when DI1 port is open circuit and deactivated when DI1 port is short circuit.	no	nc	
P74	<b>DI2 input polarity</b> no (normally open) = associated functionality is activated when DI2 port is short circuit and deactivated when DI2 port is open circuit. nc (normally closed) = associated functionality is activated when DI2 port is open circuit and deactivated when DI2 port is short circuit.	no	nc	
P75	<b>Invert alarm relay</b> Alarm relay operation can be inverted here 0=normal, 1= invert relay action	0	1	
P76	<b>Key board lock enable</b> Setting this parameter as "YES" enables controller keypad lock functionality after 5 minutes of no activity on the keypad. When the keypad is locked any button press shows "LoC" in the display. Press UP and DOWN buttons simultaneously for 3 seconds to unlock the keyboard. "unl" is displayed for 3 seconds.	no	YES	

## Service

**Table 15: Service**

Code	Parameter description	Min.	Max.	Unit
u--	<b>Service</b>			
u00	<b>Controller Status</b> S0=Cooling ON/Heating ON S2=wait for compressor ON time to elapse S3=wait for compressor OFF time to elapse S4=drip OFF delay after defrost S10=cooling stopped by MainSwitch OFF S11=cooling stopped by thermostat/heating OFF S14=defrosting state S15=fan delay state after defrost S17=door open (DI input) S20=emergency cooling S25=manual control of outputs S30=Pull-down S32=delay of outputs at power up			
u01	Temperature measured by Sair sensor			
u02	Reference set point used for the control			
u09	Temperature measured by evaporator sensor			
u10	Status of connected Digital input configured to DI1 Open Close			
u13	Shows status of night mode ON or OFF			
u37	Status of connected Digital input configured to DI2 Open Close			
u29	Temperature measured by condenser Sensor			
u58	Status of compressor relay ON/OFF			
u59	Status of Fan relay ON/OFF			
u60	Status of Defrost relay ON/OFF			
u63	Status of Light relay ON/OFF			
o23	<b>Relay 1 counter</b> The number of cycles for the DO1 relay can be read in this menu. The read value is multiplied by 100 to obtain the number of cycles. On reaching 999x100 cycles the counts stops and is reset to 0.	0	999	
o24	<b>Relay 2 counter</b> The number of cycles for the DO2 relay can be read in this menu. The read value is multiplied by 100 to obtain the number of cycles. On reaching 999x100 cycles the counts stops and is reset to 0.	0	999	
o25	<b>Relay 3 counter</b> The number of cycles for the DO3 relay can be read in this menu. The read value is multiplied by 100 to obtain the number of cycles. On reaching 999x100 cycles the counts stops and is reset to 0.	0	999	
o26	<b>Relay 4 counter</b> The number of cycles for the DO4 relay can be read in this menu. The read value is multiplied by 100 to obtain the number of cycles. On reaching 999x100 cycles the counts stops and is reset to 0."	0	999	
u80	Firmware version readout			
u82	Controller code number			

## Parameters: ERC 211

### Configuration

**Table 16: Configuration**

Function	Code	Min.	Max.	Unit	AP0	AP1	AP2	AP3	AP4	AP5
<b>Configuration</b>	<b>cFg</b>

Maximum voltage	A75	0	270	V	270	270	270	270	270	270

## Defrost

**Table 19: Defrost**

Function	Code	Min.	Max.	Unit	AP0	AP1	AP2	AP3	AP4	AP5
<b>Defrost</b>	<b>d--</b>									
Defrost Method (no=no defrost, nAt=Natural)	d01	no	nAt		nAt	no	nAt	nAt	no	no
Defrost stop temperature.	d02	0.0	50.0	°C	6.0	-	-	8.0	-	6.0
Defrost Interval	d03	0	240	hour	8.0	-	6.0	6.0	-	8.0
Max defrost Time	d04	0	480	min	30	-	45	60	-	30
Defrost delay at power up (or DI signal)	d05	0	240	min	0	-	0	0	-	-
Drip delay	d06	0	60	min	0	-	0	0	-	-
Defrost stop sensor non=None (Time), Air = Sair temp. Sensor	d10	non	Air		non	-	non <sup>(1)</sup>	Air <sup>(1)</sup>	-	non
Accumulated Compressor runtime to start defrost (0=OFF)	d18	0	96	hour	0	-	0	0	-	-
Defrost delay after pull down cycle	d30	0	960	min	0	-	0	0	-	-

<sup>(1)</sup> This option is a default setting in the controller and cannot be changed.

## Compressor

Table 20: Compressor

Function	Code	Min.	Max.	Unit	AP0	AP1	AP2	AP3	AP4	AP5
<b>Compressor</b>	<b>c--</b>									
Compressor minimum ON time	C01	0	30	min	0.0	0.0	0.0	0.0	0.0	0.0
Compressor minimum OFF time	C02	0	30	min	2.0	2.0	2.0	2.0	2.0	2.0
Compressor OFF delay at open door	C04	0	900	sec	900.0	900.0	900.0	900.0	900.0	60.0
Zero crossing selection (YES / no)	C70	no	YES		YES	YES	YES	YES	YES	YES <sup>(1)</sup>

<sup>(1)</sup> This option is a default setting in the controller and cannot be changed.

## Others

Function	Code	Min.	Max.	Unit	AP0	AP1	AP2	AP3	AP4	AP5
<b>Others</b>	<b>o--</b>									
Delay of outputs at startup	o01	0	600	sec	10	10	10	10	10	10 <sup>(1)</sup>
DI1 configuration nC= Not configured; Sdc = Status display output, doo = Door alarm with resumption, doA = Door alarm without resumption, SCH = Main switch, nig = Day/ Night mode, rFd = Reference displacement, EAL = External alarm, dEF = Defrost, Pud = Pull down; Sc = Condensor Sensor	o02	oFF	Sc		oFF	oFF	oFF	oFF	oFF	oFF
Serial address	o03	0	247	No	0	0	0	0	0	-
Password	o05	0	999	No	0	0	0	0	0	0
Sensor type selection (n5=NTC 5K, n10=NTC10K, ptc=PTC, pt1=PT1000)	o06 <sup>(2)</sup>	n5	ptc		n10	n10	n10	n10	n10	n10
Cooling/Heating (rE=Cooling, Ht= Heating)	o07 <sup>(2)</sup>	rE	Ht		rE	rE <sup>(1)</sup>	rE <sup>(1)</sup>	rE <sup>(1)</sup>	Ht <sup>(1)</sup>	rE
Display Resolution	o15	0.1	1.0		0.1	0.1	0.1	0.1	0.1	0.1 <sup>(1)</sup>
Predefined applications	o61 <sup>(2)</sup>	AP0	AP5		AP0	AP1	AP2	AP3	AP4	AP5
Save settings as factory	o67	no	YES		no	no	no	no	no	-
<b>⚠ WARNING:</b> The earlier factory settings are overwritten										
Display during defrost Air=actual air temperature, FrE=frezed temperature, -d="-d-" is displayed	o91	-d-	Air		-d-	-	-d-	-d-	-	-d <sup>(1)</sup>

<sup>(1)</sup> This option is a default setting in the controller and cannot be changed.

<sup>(2)</sup> This parameter can only be set when regulation is stopped, i.e. "r12" is set to 0

## Polarity

Table 21: Polarity

Function	Code	Min.	Max.	Unit	AP0	AP1	AP2	AP3	AP4	AP5
<b>Polarity</b>	<b>P--</b>									
DI1 input polarity (nc/no) no = normally open nc = normally closed	P73	no	nc		no	no	no	no	no	no
Key board lock (no / yes)(0=no, 1=yes)	P76	no	YES		no	no	no	no	no	-

## Parameters: ERC 213

<sup>(1)</sup> This option is a default setting in the controller and cannot be changed.

<sup>(2)</sup> This parameter can only be set when regulation is stopped, i.e. "r12" is set to 0

## Polarity

Table 37: Polarity

Function	Code	Min.	Max.	Unit	AP0	AP1	AP2	AP3	AP4	AP5	AP6	AP7
<b>Polarity</b>	<b>P--</b>											
DI1 input polarity (nc/no) no = normally open nc = normally closed	P73	no	nc		no	no	no	no	no	no	no	no
DI2 input polarity (nc/no) no = normally open nc = normally closed	P74	no	nc		no	no	no	no	no	no	no	no
Invert alarm relay (0= normal, 1= invert relay ac- tion)	P75	0	1		0	0	0	0	0	0	-	0.0
Key board lock (no / yes)(0=no, 1=yes)	P76	no	YES		no	no	no	no	no	no	-	no

## Alarm code

In an alarm situation the display will alternate between readout of the actual air temperature and readout of the alarm codes of active alarms. Various alarm codes and their descriptions are as below.

**Table 38: Alarm codes**

Code	Alarms	Description
E29	Sair sensor error	Air temperature sensor is defect or electrical connection is lost
E27	Def sensor error	SS Evaporator sensor is defect or electrical connection is lost
E30	Sc sensor error	Sc Condenser sensor is defect or electrical connection is lost
A01	High temp alarm	Air temperature in cabinet is too high
A02	Low temp alarm	Air temperature in cabinet is too low
A99	High Volt alarm	Supply voltage is too high (compressor protection)
AA1	Low Volt alarm	Supply voltage is too low (compressor protection)
A61	Condenser alarm	Condenser temp. too high - check air flow
A80	Cond. block alarm	Condenser temp. too high - manual reset of alarm required <sup>(1)</sup>
A04	Door alarm	Door has been open for too long
A15	DI Alarm	External alarm from DI input
A45	Standby Alarm	Control has been stopped by "r12 Main switch"

<sup>(1)</sup> The condenser block alarm can be reset by setting r12 Main switch OFF and ON again or by powering down the controller.

**Product specification**

**Technical specification**

**Table 39: Technical specification**

Features	Description
Purpose of control	Operating temperature sensing control suitable for incorporation into commercial air-conditioning and refrigeration applications
Construction of control	Incorporated control
Power supply	115 V AC / 230 V AC 50/60 Hz, galvanic isolated low voltage regulated power supply
Rated power	Less than 0.7 W
Inputs	Sensor inputs, Digital inputs, Programming key Connected to SELV limited energy <15 W
Allowed sensor types	NTC 5000 Ohm at 25 °C, (Beta value=3980 at 25/100 °C - EKS 211) NTC 10000 Ohm at 25 °C, (Beta value=3435 at 25/85 °C - EKS 221) PTC 990 Ohm at 25 °C, (EKS 111) Pt1000, (AKS 11, AKS 12, AKS 21)
Sensors included in kit Solution	NTC 10000 Ohm at 25 °C, cable length: 1.5 m
Accuracy	Measuring range: -40 – 105 °C (-40 – 221 °F)  Controller accuracy: ±1 K below -35 °C, ±0.5 K between -35 – 25 °C ±1 K above 25 °C
Type of action	1B (relay)
Output	DO1 - Relay 1: 16 A, 16 (16) A, EN 60730-1 10 FLA / 60 LRA at 230 V, UL60730-1 16 FLA / 72 LRA at 115 V, UL60730-1  DO2 - Relay 2: 8 A, 2 FLA / 12 LRA, UL60730-1 8 A, 2 (2 A), EN60730-1  DO3 - Relay 3: 3 A, 2 FLA / 12 LRA, UL60730-1 3 A, 2 (2 A), EN60730-1  DO4 - Relay 4: 2 A
Display	LED display, 3 digits, decimal point and multi-function icons, °C + °F scale
Operating conditions	-10 – +55 °C (14 – 131 °F), 90% Rh
Storage conditions	-40 – +70 °C (-40 – +158 °F), 90% Rh
Protection	Front: IP65 (Gasket integrated) Rear: IP00
Environmental	Pollution degree II, non-condensing
Overvoltage category	II - 230 V supply version - (ENEC, UL recognized) III - 115 V supply version - (UL recognized)
Resistance to heat and fire	UL94-V0 Temperature for ball pressure test statement According to Annex G (EN 60730-1)
EMC category	Emission: IEC/EN 61000 6-3, Immunity: IEC/EN 61000 6-2

**Mounting**

**Figure 16: Mounting**

**Figure 17: Dismounting**

## Installation steps

- Place the wired controller in the slot and ensure rubber sealing is resting properly on the mounting surface.
- Slide the mounting clips along the rails of the rear plastic from the rear side of the panel.
- Slide the clips towards mounting surface until controller is firmly fixed.
- To remove the controller, one needs to skillfully unlatch the snapping tab and pull the clips backwards.

## Dimensions

Figure 18: Dimensions (mm)

## Accessories

### KoolKey (EKA200)

KoolKey acts as a gateway to connect PC tool KoolProg and also a programming key.

Figure 19: KoolKey (EKA 200) as gateway

A	Standard Micro-USB cable
B	KoolKey
C	Interface cable
D	Controller

Figure 20: KoolKey (EKA 200) as programming key

A	Koolkey
B	Interface cable
C	Controller

Refer to the KoolKey [installation guide](#) for detailed instructions.

### Mass Programming Key (EKA 201)

Mass Programming Key is a simple programming key for programming the controller in production assembly line.

Figure 21: Mass Programming Key (EKA 201)

A	EKA 201
B	Interface cable
C	Controller

Refer to the EKA 201 [installation guide](#) for detailed instructions.

### Bluetooth Adapter (EKA 202 & EKA 203)

Bluetooth Adapter: external plug-in type module that provides wireless connectivity with Danfoss mobile application "KoolConnect".

Figure 22: Bluetooth Adapter (EKA 202 & EKA 203)

A	Bluetooth adapter
B	Interface cable
C	Controller

Refer to the EKA 202/203 [installation guide](#) for detailed instructions.

## Ordering

**NOTE:**

All the mounted sensors must be of same type.

**Certificates, declarations, and approvals**

The list contains all certificates, declarations, and approvals for this product type. Individual code number may have some or all of these approvals, and certain local approvals may not appear on the list.

Some approvals may change over time. You can check the most current status at danfoss.com or contact your local Danfoss representative if you have any questions.

**Certificates, declarations, and approvals**

**Table 43: Certificates, declarations, and approvals**

Regulatory and Compliance	Directive / Document topic	Standards	Country - Marking
Electrical Safety (Incorporated Control for use in Class I or Class II equipment)	Low Voltage Directive: 2014/35/EU	EN IEC 60730-2-9:2019, EN IEC 60730-2-9:2019/A1:2019, EN IEC 60730-2-9:2019/A2:2020, EN 60730-1:2016, EN 60730-1:2016/A1:2019, EN 60730-1:2016/A2:2022	Europe - CE
Electrical Safety (control is validated to use as Incorporated)	Recognized Component	UL 60730-1 - 2009 - Revision 2014, UL 60730-2-9 : 2010, Revision : 2013	United States - cUR <sub>US</sub>
Electrical Safety (control is validated to use as Incorporated)	Recognized Component	CSA E60730-1 :2013, CSA E60730-2-9 : 2001, Revision : 2008, AMD 1	Canada - cUR <sub>US</sub>
Electrical Safety (Incorporated Control for use in Class I or Class II equipment)	-	GB 14536.1:2008, GB 14536.10:2008	China - CQC
Electrical Safety & Electromagnetic Compatibility	Supplier Declaration of Conformity (SDoC)	EN 60730-1:2016, EN 60730 2-9:2019, EN 610006-2:2005 & EN 61000-6-3:2007+A1:2011	Ukraine - UA
Electrical Safety	Certification of Conformity (CoC)	CU TR 004/2011	Eurasia - EAC
Electromagnetic Compatibility	EMC Directive: 2014/30/EU	EN 610006-2:2005 & EN 61000-6-3:2007+A1:2011	Europe - CE
RoHS	RoHS Directive: 2011/65/EU & 2015/863/EU	EN IEC 63000:2018	Europe - CE
Food Safety	Food Equipment	NSF/ANSI standard 2	United States
Approved for use in Flammable Refrigerants	Enclosed Break Device / sealed device nC (Relays)	Sealed Device "nC" IEC 600079-15:2017, Enclosed-Break device "dC" IEC 60079-1:2014, clause 15.5.3	Europe
Approved for use in Flammable Refrigerants	Enclosed Break Device (Relays)	Sealed device "nC" UL 60079-15 and CAN/CSA C22.2 No. 60079-15, Enclosed-Break device "dC" IEC 60079-1:2014, clause 15.5.3	US and Canada
Enclosure Material Flammable Class	-	UL 94, V-0	US
HACCP, Temperature Measuring probe in compliance with EN13485 Class I, when used with AKS 12 sensor	-	EN 13485:2001	Europe
Certification and Manufacturer Declarations on Conformity	CE, cUR <sub>US</sub> , CQC, UA, EAC, NSF, RoHS		

## Online support

Danfoss offers a wide range of support along with our products, including digital product information, software, mobile apps, and expert guidance. See the possibilities below.

### The Danfoss Product Store

The Danfoss Product Store is your one-stop shop for everything product related—no matter where you are in the world or what area of the cooling industry you work in. Get quick access to essential information like product specs, code numbers, technical documentation, certifications, accessories, and more.

Start browsing at [store.danfoss.com](https://store.danfoss.com).

### Find technical documentation

Find the technical documentation you need to get your project up and running. Get direct access to our official collection of data sheets, certificates and declarations, manuals and guides, 3D models and drawings, case stories, brochures, and much more.

Start searching now at [www.danfoss.com/en/service-and-support/documentation](https://www.danfoss.com/en/service-and-support/documentation).

### Danfoss Learning

Danfoss Learning is a free online learning platform. It features courses and materials specifically designed to help engineers, installers, service technicians, and wholesalers better understand the products, applications, industry topics, and trends that will help you do your job better.

Create your Danfoss Learning account for free at [www.danfoss.com/en/service-and-support/learning](https://www.danfoss.com/en/service-and-support/learning).

### Get local information and support

Local Danfoss websites are the main sources for help and information about our company and products. Find product availability, get the latest regional news, or connect with a nearby expert—all in your own language.

Find your local Danfoss website here: [www.danfoss.com/en/choose-region](https://www.danfoss.com/en/choose-region).
