

P20 Adjustable Pressure Switch

For Air-Conditioning and Heat Pump Applications

Product Bulletin

The P20 series high and low limit (cut-out) controls for all non-corrosive refrigerants are compact pressure controls ideally suited for commercial or residential packaged air conditioning units, heat pumps, small water chillers, ice cube machines and other applications where a semi fixed setting is acceptable or required and where mounting space is limited.

The P20 series includes auto reset as well as manual reset models and is factory set.

A special setting tool is available while also field (screwdriver) adjustable models can be chosen.

Features

- **Field proven reliability**
More than half a million in use today
- **Reset tab must be released before restart (Trip free manual reset)**
Override of control function is not possible
- **Compact design**
Less cabinet space needed
- **Enclosed dust-tight switch**
Prevents contacts pollution
- **SPDT contact with special terminals**
Can be used either as quick or as screw terminals
- **Test pressure 53 bar**
Test strength far above severe operating and standby conditions
- **Designed for at least 300000 cycles**
Accurate repeatability and long life

Note: The controls are intended to control equipment under normal operating conditions. Where failure or malfunctioning of the controls could lead to an abnormal operating condition that could cause personal injury or damage to the equipment or other property, other devices (limit or safety controls) or systems (alarm or supervisory systems) intended to warn of or protect against failure or malfunctioning of the controls must be incorporated into and maintained as part of the control system.

Description

The P20 series are available in three categories (see “Type number selection” table):

- 1. Universal replacement models.** These models are individually packed and can be purchased in any quantity. The models are provided with an extra second suffix number “C” The models are field adjustable by use of the special wrench WRN12-1 (must be ordered separately).
- 2. Basic models.** These are factory set but can be adjusted by use of a special wrench (see “Accessories”). They can be purchased in bulkpack of 50 pcs each.
- 3. Special (OEM) models.** For yearly order quantities above 1000 pcs these models can have optional constructions like:
 - Screwdriver adjustment
 - 120 cm capillary
 - Range -0.6 to 7 bar
 - Range 14 to 42 bar (R410A applications)
 - Other pressure connection style

The minimum shipping quantity from factory is 250 pieces per model (5 boxes). Please contact your Johnson Controls representative.

Installation

The P20 controls can be installed in any convenient location provided that the ambient conditions are suitable for the IP00 enclosure, within the specified limits regarding temperature and humidity and normal pollution situation. Each control is provided with 2 mounting screws (6-32UNC x 4.5 mm thread).

For easy mounting different types of mounting brackets are available (see “Accessories”).

Adjustment

All models are factory set. Models can be field adjusted by use of a special wrench (see “Accessories”).

The differential is not adjustable but can be selected from the “Differential Specifications” matrices.

Range

The indicated range means from the “minimal low switchpoint” up to the maximum “high switch point”. This means that the “differential” cannot be at the outside of the indicated range.

Contact functions

Low Pressure version

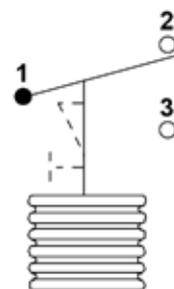

Figure 1: 1 - 2 open on pressure decrease

High Pressure version

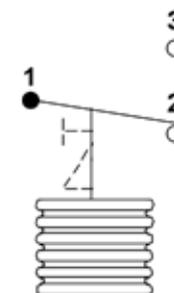

Figure 2: 1 - 2 open on pressure increase

Accessories

The following accessories are available:

- Adjusting wrench WRN12-1 for adjustment of all models. (Fig. 8)
- Clip-on terminal cover. (Fig. 9)
- Mounting plate BKT116-4000 for single P20. (Fig. 10)
- Mounting bracket 210-25R for single P20, angled version. (Fig. 11)

Type number selection

P20EA-9650K

P20 **E** **A** - 9 **6** **5** 0 **K**

This is the model number suffix that indicates the selected switch point (see "Differential Specification" matrices - horizontal line). The figures given at the intersection of this horizontal line and the selected differential column indicates the pressure differential that belongs to the selected switch point. The model suffix is indicated in the "Differential Specification" matrices. The above mentioned model P20EA-9650K indicates:

- Auto reset
- Basic model (special adjustment tool WRN12-1 needed)
- Connection style 13
- Differential AM equals 1.2 bar
- High switch point 16 bar.

Pressure differential

This is indicated in the "Differential Specification" matrices. The differential code is indicated by two characters. Each differential code compares with a digit as indicated below. (Not valid for manual reset models).

Differential digit in model number	Differential Code	
1	AL	LP Models
2	BL	
3	CL	
4	DL	
5	AM	HP Models
6	BM	
7	CM	
8	DM	HP (R410A) Models
6	BR	
7	CR	
8	DR	

Pressure connection style

(see "Type number selection table")

1	Style 45A
5	Style 50, 51 or customer special
6	Style 13
9	Style 34

A	Basic and universal models (only adjustable with special wrench)
L	Provided with bellows for R410A application (HP only)

E	Auto reset
F	Manual reset lockout low
G	Manual reset lockout high

Differential specification matrix for LP models, values in bar

Low switch point	Differential code				Model suffix
	AL (1)	BL (2)	CL (3)	DL (4)

Note

(*) Minimum low switch point to maximum high switch point.

(**) When ordering specify setting by adding the model suffix.

⁽¹⁾ Reset possible ≥ 3 bar above low switch point

⁽²⁾ Reset possible ≥ 7 bar below high switch point.

Repair and replacement

Repair is not possible. In case of an improperly functioning control, please check with your nearest supplier. When contacting the supplier for a replacement you should state the type/model number of the control. This number can be found on the data plate.

- ④ 2 Mounting holes 6 - 32 UNC thread (2 screws 6-32UNC x 4,5 mm provided with each control).

Technical Specifications

Type Number	See "Type Number selection" table
Operating Range	
<i>LP models</i>	0.5 – 10 bar
<i>HP models</i>	7 – 29 bar
<i>R410A/HP models</i>	14 – 42 bar
Pressure connections	90 cm capillary, Styles 13, 34, 45A, 50 and 51
Switch points and differentials	See "Differential Specification" matrices
Adjustment	Wrench adjustment
Ambient Temperature	from -35°C to +55 °C
Ambient humidity	10 to 95% RH (non-condensing)
Test pressure	53 bar max.
Minimum burst pressure	200 bar
Protection Class	IP00
Electrical Rating	15(8)A 230 Vac
Contact	SPDT snap-acting switch
Wiring Connections	Screw terminals 1 up till 2.5 mm ² Quick connector type 6.3 mm
Material	
<i>Case</i>	Cold rolled steel, zinc plated with dichromate dip
<i>Capillary</i>	Copper
Packaging	50 controls per box
Shipping Weight	15 kg per box
Dimensions	See "Dimensions" drawings
CE Compliance	Johnson Controls, Inc., declares that these products are in compliance with the essential requirements and other relevant provisions of the EMC Directive 2014/30/EU and Low Voltage Directive 2014/35/EU. RoHS Directive 2011/65/EU.

Note

1 bar = 100 kPa ≈ 14.5 psi.

The performance specifications are nominal and conform to acceptable industry standards. For application at conditions beyond these specifications, consult the local Johnson Controls office. Johnson Controls, Inc. shall not be liable for damages resulting from misapplication or misuse of its products.
