READ THIS INSTRUCTION SHEET AND THE SAFETY WARNINGS CAREFULLY BEFORE INSTALLING AND SAVE IT FOR FUTURE USE

General Features

The P74 is a differential pressure control designed to sense pressure difference of water and non corrosive refrigerants. The P74xx-97xx series are also suitable for use in ammonia applications. According to EN 60730, it is a type 1 action, incorporate control suitable for surface mounting on a plane surface and for use in normal pollution situation.

Figure 1: P74 Dimensions (in mm):

- A Reset button
- B Mounting hole, Ø 5 mm
- C Mounting slot
- D 10 - 32 UNF2B

Figure 2: Specification

- 1 Adjusting disk
- 2 Differential nut
- 3 Cut-out pointer
- 4 Cut-in pointer
- 5 Contact block terminals

Mounting / Installation Instructions

Figure 3: Mounting

WARNING: These controls are designed for use only as operating controls. Where an operating control failure would result in personal injury or loss of property it is the responsibility of the installer to add devices or systems that protect against, or warn of, control failure.

WARNING: DO NOT TURN SEALED SCREWS!

- The control should be mounted above the element connections to provide drainage from the sensing elements, also the control should be mounted so that the pressure connections on the bellows are above the liquid level of the equipment.
- Disconnect from power supply before the cover is removed.
- Fasten the cover screw securely to provide proper earthing of the cover.

Check out procedure

Before leaving the installation observe at least three complete operating cycles to be sure that all components are functioning correctly. If not contact your supplier.

Wirings

Figure 4: Wirings

WARNING: All wiring should conform to local codes and must be carried out by authorized personnel only. When using multi stranded wire apply a cable ferrule to the cable end.

WARNING: For P74DA-xxxx models use terminal screws furnished in the switch (8-32x1/4"). Longer terminal screws can interfere with the switch mechanism and damage the switch.

Adjustment

Figure 5: Adjustment

Adjusting disk changes both cut-in and cut-out point.

ENGLISH

Contact function

Figure 6: Contact function

a Type P74EA and P74FA

- 1-2 Closes on increase of differential pressure
- 1-3 Opens simultaneously

b Type P74DA

- Contacts close on increase of differential pressure

Repair and replacement

Power elements may be replaced in the field. Other repairs are not possible. In case of an improperly functioning control, please check with your nearest supplier.

When contacting the supplier for a replacement you should state the type/model number of the control. This number can be found on the data plate or cover label.

Pressure connections

Figure 7: Pressure connections

a Style 15

c Style 13

b Style 5 Male connections

- 1 90 cm capillary
- 2 7/16"-20 UNF nut for 1/4" SAE flare tube

Accessories

Figure 8: Accessories

a Compression coupling

c 90 cm Capillary with (2) flare nuts

b Mounting Bracket

Accessories Ordering Codes

| | |
|-------------|-------------------------------------|
| 271-51L | Mounting Bracket |
| CNR003N001R | Compression coupling (6 mm) |
| CNR003N002R | Compression coupling (8 mm) |
| SEC002N600 | 90 cm capillary with two flare nuts |

Technical Specifications

Types,ranges differentials

See type number selection table

Media

Ammonia (for special models), non-corrosive refrigerant or water

Pressure connectors

See type number selection table

Max overrun pressure

See type number selection table

Ambient temperature limits

-30 / +55 °C

Material

- Case Cold-rolled steel, zinc plated
- Cover Cold-rolled steel, grey enamel finish

Pressure element

See type number selection table

Protection

IP30

Electrical ratings

See type number selection table

Shipping weight

- Ind. pack 1.2 Kg
- Overpack 12 Kg (10 pcs)

The performance specifications are nominal and conform to acceptable industry standards. For applications at conditions beyond these specifications, consult the local Johnson Controls office or representative. Johnson Controls shall not be liable for damages resulting from misapplication or misuse of its products.

Fonction de contact

Figure 6 : Fonction de contact

a Types P74EA et P74FA

- 1-2 Se ferme lorsque la pression différentielle augmente
- 1-3 S'ouvre simultanément

b Type P74DA

- Les contacts se ferment lorsque la pression différentielle augmente

Réparations et remplacement

Les éléments d'alimentation électrique peuvent être remplacés sur le terrain. Les autres réparations ne sont pas possibles.

En cas de dysfonctionnement du régulateur, contacter le fournisseur le plus proche.

Indiquer la référence du type/modèle du régulateur au fournisseur contacté pour un remplacement. Cette référence se trouve sur la plaque d'identification ou l'étiquette du couvercle.

Connecteurs de pression

Figure 7 : Connecteurs de pression

a Style 15

c Style 13

b Raccordements mâles de style 5

- 1 Capillaire de 90 cm
- 2 Écrou 7/16"-20 UNF pour tube évasé 1/4" SAE

Accessoires

Figure 8 : Accessoires

a Couplage de compression

c Capillaire de 90 cm avec (2) raccords coniques

b Support de montage
