

Data sheet

Differential pressure controller (PN 25) AVP - return and flow mounting, adjustable setting

Description

AVP(-F) is a self-acting differential pressure controller primarily for use in district heating systems. The controller closes on rising differential pressure.

The controller has a control valve, an actuator with one control diaphragm and handle for differential pressure setting (fixed setting version (available on special request) is without handle).

Main data:

- DN 15-50
- k_{vs} 0.4-25 m³/h
- PN 25
- Setting range (AVP): 0.2-1.0 bar / 0.3-2.0 bar
- Fixed setting (AVP-F)¹⁾: 0.2 bar / 0.5 bar
- Temperature:
 - Circulation water / glycolic water up to 30%: 2 ... 150 °C
- Connections:
 - Ext. thread (weld-on, thread and flange tailpieces)
 - Flange

¹⁾ On special request

Ordering

Example 1:
Differential pressure controller;
return mounting; DN 15; k_{vs} 1.6;
PN 25; setting range 0.2-1.0 bar;
 T_{max} 150 °C; ext. thread

- 1x AVP DN 15 controller
Code No: **003H6283**
- 1x Impulse tube set AV, R 1/8
Code No: **003H6852**

Option:
- 1x Weld-on tailpieces
Code No: **003H6908**

The controller will be delivered completely assembled, inclusive impulse tube between valve and actuator. External impulse tube (AV) must be ordered separately.

AVP Controller (return mounting)

Note: other controllers available on special request.

Ordering (continuous)

Example 2 - AVP controller without predefined impulse tube:

Differential pressure controller; flow mounting; DN 15; k_{vs} 4.0; PN 25; setting range 0.2-1.0 bar; T_{max} 150°C; flange

- 1x AVP DN 15 controller
Code No: **003H6369**
- 2x Impulse tube set AV, R 1/8
Code No: **003H6852**

- Option:
- 1x Weld-on tailpieces
Code No: **003H6908**

The controller will be delivered completely assembled, without impulse tube between valve and actuator. External impulse tubes (AV) must be ordered separately.

¹⁾ On special request.

Application principles
- Return mounting

- Flow mounting

Installation positions

Up to medium temperature of 100 °C the controllers can be installed in any position.

For higher temperatures the controllers have to be installed in horizontal pipes only, with a pressure actuator oriented downwards.

Pressure temperature diagram

Sizing

- Directly connected heating system

Example 1

Motorised control valve (MCV) for mixing circuit in direct-connected heating system requires differential pressure of 0.3 bar (30 kPa).

Given data:

- Q_{max} = 1.2 m³/h (1200 l/h)
- Δp_{min} = 0.7 bar (70 kPa)
- * $\Delta p_{circuit}$ = 0.1 bar (10 kPa)
- Δp_{MCV} = 0.3 bar (30 kPa) selected

*Remark

$\Delta p_{circuit}$ corresponds to the required pump pressure in the heating circuit and is not to be considered when sizing the AVP.

The differential pressure set value is:

$$\Delta p_{set\ value} = \Delta p_{MCV}$$

$$\Delta p_{set\ value} = 0.3\ bar\ (30\ kPa)$$

The total pressure loss across the controller is:

$$\Delta p_{AVP} = \Delta p_{min} - \Delta p_{MCV} = 0.7 - 0.3$$

$$\Delta p_{AVP} = 0.4\ bar\ (40\ kPa)$$

Possible pipe pressure losses in tubes, shut-off fittings, heatmeters, etc. are not included.

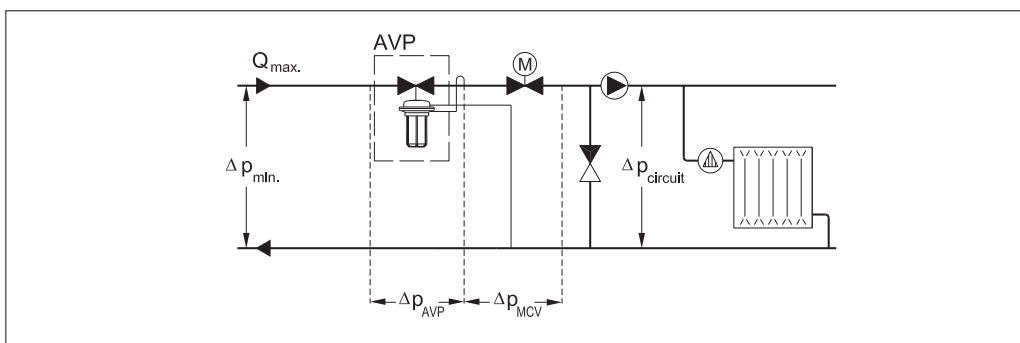

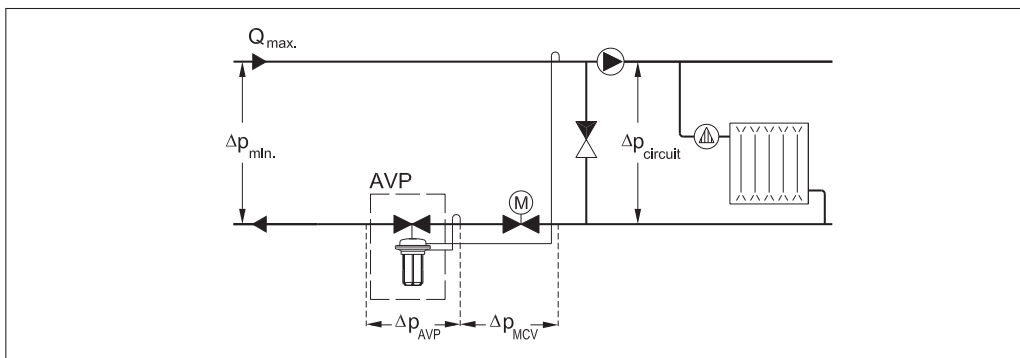

k_v value is calculated according to formula:

$$k_v = \frac{Q_{max}}{\sqrt{\Delta p_{AVP}}} = \frac{1,2}{\sqrt{0,4}}$$

$$k_v = 1.9\ m^3/h$$

Solution:

The example selects AVP DN 15, k_{vS} value 2.5, with differential pressure setting range 0.2-1.0 bar.

Sizing (*continuous*)

- Indirectly connected heating system

Example 2

Motorised control valve (MCV) for indirectly connected heating system requires differential pressure of 0.4 (40 kPa) bar.

Given data:

- $Q_{max} = 1.25 \text{ m}^3/\text{h}$ (1250 l/h)
- $\Delta p_{min} = 1.0 \text{ bar}$ (100 kPa)
- $\Delta p_{exchanger} = 0.05 \text{ bar}$ (5 kPa)
- $\Delta p_{MCV} = 0.4 \text{ bar}$ (40 kPa) selected

The differential pressure set value is:

$$\Delta p_{set \text{ value}} = \Delta p_{exchanger} + \Delta p_{MCV} = 0.05 + 0.4$$

$$\Delta p_{set \text{ value}} = 0.45 \text{ bar (45 kPa)}$$

The total pressure loss across the controller is:

$$\Delta p_{AVP} = \Delta p_{min} - \Delta p_{exchanger} - \Delta p_{MCV} = 1.0 - 0.05 - 0.4$$

$$\Delta p_{AVP} = 0.55 \text{ bar (55 kPa)}$$

Possible pipe pressure losses in tubes, shut-off fittings, heatmeters, etc. are not included.

k_v value is calculated according to formula:

$$k_v = \frac{Q_{max}}{\sqrt{\Delta p_{AVP}}} = \frac{1,25}{\sqrt{0,55}}$$

$$k_v = 1.7 \text{ m}^3/\text{h}$$

Solution:

The example selects AVP DN 15, k_{vs} value 2.5, with differential pressure setting range 0.2-1.0 bar.

Design

- 1. Valve body
- 2. Valve insert
- 3. Pressure relieved valve cone
- 4. Valve stem
- 5. Control drain
- 6. Control diaphragm for diff. pressure control
- 7. Setting spring for diff. pressure control
- 8. Handle for diff. pressure setting, prepared for sealing
- 9. Union nut
- 10. Upper casing of diaphragm
- 11. Lower casing of diaphragm
- 12. Compression fitting for impulse tube
- 13. Excess pressure safety valve
- 14. Actuator

Function

Pressure changes from flow and return pipes are being transferred through the impulse tubes and/or control drain in the actuator stem to the actuator chambers and act on control diaphragm for diff. pressure control. The diff. pressure is controlled by means of setting spring for diff. pressure control. Control valve closes on rising differential pressure and opens on falling differential pressure to maintain constant differential pressure.

Controller is equipped with excess pressure safety valve, which protects control diaphragm for diff. pressure control from too high differential pressure (not implemented at AVP-F flow mounting version).

Settings

Differential pressure setting

Differential pressure setting (valid for AVP controller only) is being done by the adjustment of the setting spring for diff. pressure control. The adjustment can be done by means of handle for diff. pressure setting and/or pressure indicators.

Adjustment diagram

Relation between scale figures and differential pressure. Values given are approximate.
